Gas Conversion Appliances

Catalog No. 11

Manufactured by

ANDERSON & FORRESTER

2563 LARIMER STREET DENVER, COLORADO

INTRODUCTION

It has been our privilege to serve the gas industry for over 30 years with materials used to convert appliances from manufactured to natural gas, as well as mixed gas, Butane Air-Gas, Propane Air-Gas, and high B.T.U. oilgas, etc. During these years our emblem of Quality and Service has become known in all parts of these United States and Canada. Our products have been used in every city where gas conversions have been made during these many years.

We have served the Butane and Propane gas industry since its infancy when only a small number of dealers were active. We have watched the industry grow into its magnificent position of today. Through these years we have been privileged to serve you and to grow with you, serving you with various orifice plugs, caps, jets and special tools.

It has been our ambition to put these many special parts and tools needed from time to time under one roof, to make parts available for the servicing of appliances more simple. The special tools we have developed have helped simplify the serviceman's task.

The confidence of the industry in our products throughout the years has made us the recognized leaders in the field.

In the manufacture of our products, Quality is our first consideration, "Service" is our motto. These are the considerations demanded by you.

It is a real pleasure to serve you.
